

Save and Archive

1. With ProxSys MA you can upload your source content directly from solid state or other media
2. The MA Upload Tool enables convenient upload via a intuitive GUI
3. The full content is transferred to the MA Server (if uploaded via network)
4. Automatically the High-Res content is burnt by the Rimage Blu-ray robot. The MA 10 creates an iso-image which has to be burnt manually
5. Two Blu-rays are created containing the High-Res video, native file structure and preview clips
6. One disc is for safe long term archiving while the second can be used constantly

SAVE & ARCHIVE

SEARCH & RETRIEVE

Search and Retrieve

1. To search and retrieve your media files you can use the MA search engine with full text and ID search. Native metadata is imported with the media, individual can be added while uploading
2. As soon as media is uploaded to the MA a preview clip is generated. Using these previews you can verify and watch the desired clips
3. Create a custom short list to simplify the retrieval of clips on multiple discs
4. Take the short list to the use archive and grab the desired discs
5. Use your content in multiple ways - e.g. take the disc to your NLE
